The Ontario Association of Public Health Nursing Leaders

Leading the Way for Public Health Nursing

The Ontario Association of Public Health Nursing Leaders (OPHNL) fully supports the recent reports from the Chief Medical Officer of Health (Being Ready) and Association of Local Public Health Agencies (Public Health Resilience in Ontario and Pre-Budget Submission: Public Health Programs and Services). In addition, OPHNL recommends that:

The Province increase and stabilize permanent funding for public health nurses to address service delivery backlogs and implement innovative, convenient and easily accessible programs to promote health, prevent disease, and support the Province's identified priorities immediately and over the long term.

Public health units provide upstream programs and services that are key to mitigating the long-term health, psychological and economic impacts of the COVID-19 pandemic. The public health work-force is comprised of a highly integrated interdisciplinary team of public health professionals. It is the role of OPHNL, while acknowledging the valuable work of our interdisciplinary partners, to speak specifically to the contribution that public health nurses make through mandated and locally innovative programs and services.

Public Health Nursing programs and interventions aim to address health inequities by focusing on priority populations. Through increased and stabilized permanent funding for public health nurses local public health units can flexibly respond to community needs and achieve the desired outcomes by scaling up or introducing interventions that support the Province's identified priorities.

The chart below represents a **few examples of nurse-delivered evidence informed programs and interventions** from across the province. These programs and interventions have been successfully implemented in collaboration with local communities to achieve desired outcomes.

	Desired Outcome	Examples of Programs & Interventions
SCIP	Improved vaccination rates	 Community and school based vaccine clinics Health teaching to decrease vaccine hesitancy Health promotion to create supportive environments, tailor health services for priority populations, provide health education, and enforce legislation
ř	Reduced impact of adverse child- hood experiences	 Health promotion to support healthy behaviours dur- ing preconception and pregnancy and reduce risk fac- tors for poor fetal outcomes.
٨	Increased number of children are ready for school	 Home-visiting and community programs that (a) sup- port healthy relationships between parents and chil- dren, and (b) support and assess healthy childhood
=	Increased number of children with developmental concerns who are identified early	growth and development (e.g.: Healthy Babies Healthy Children, Nurse Family Partnership, positive parenting programs) Intersectoral systems navigation and coordination to
		improve access to services
	Improved access to mental health supports across the lifespan.	 Health promotion programs that support social con- nectedness, positive self-esteem, resilience, and pos- itive coping skills.
		 Groups that support perinatal and post partum mental health (e.g.: Cognitive Behaviour Therapy groups) Screening and early identification
		 Intersectoral systems navigation and coordination to improve access to services
		Peer to peer support
